

Jerry (Yuan) Zhou

ABOUT

I'm interested in the underlying structures and low level applications of computing machines, particularly Operating Systems, Instruction Set Architectures, Integrated Circuits, Networking, and Computer Security. I'm also able to develop high-quality user applications, be it native apps or websites.

AWARDS

REGIONAL SECOND PLACE

DIVISION II, ACM-ICPC

2019

SITE FIRST PLACE

DIVISION II, ACM-ICPC

2017

FIRST PRIZE

NATIONAL OLYMPIAD OF

INFORMATICS IN PROVINCE,

CHINA COMPUTER FEDERATION

2014

SKILLS

- Linux
- Docker
- Kubernetes
- C/C++/Golang
- Ada/SPARK
- Java/Python/TypeScript
- SQL
- CI/CD
- Release Engineering
- Complicated System Design
- Network Protocol Design
- Computer Graphics and Parallelization

EDUCATION

UNDERGRADUATE | UNIVERSITY OF CALIFORNIA, BERKELEY

Aug 2017 - May 2020 | Berkeley, CA | B.A. Computer Science

GPA: 3.854 | Major GPA: 3.976 | Major Upper Div. GPA: 4.000

EXPERIENCE

SENIOR SYSTEM SOFTWARE ENGINEER | NVIDIA CORPORATION

Jun 2020 - Present | Santa Clara, CA

- Leading core security initiatives across advanced GPU, CPU, DPU, and NIC architectures.
- Resolving critical system-level issues across organizational boundaries and global time zones.
- Analyzing low-level hardware and assembly traces; mentoring peers in advanced debugging methodologies.
- Designing and architecting next-generation security and power-efficiency features for upcoming chip platforms.

SOFTWARE ENGINEERING INTERN | KELDA INC

Jun 2019 - Aug 2019 | Berkeley, CA

- Built a scalable application in Golang that makes development in Kubernetes clusters easier for microservice developers (30k+ lines of code).
- Designed and engineered a feature that makes it easy to live update Docker images in the cluster.
- Created a framework that automatically provisions and destroys Kubernetes clusters on Google Compute Engine for the integration tests of the product.

SELECTED PROJECTS

ATHENA AI

<https://athenalab.ai/>

Nov 2024 - Present | Node.js

- A production-ready general-purpose AI agent framework with planning, memory, and reflection capabilities.
- Plugin-based architecture for dynamic tool use and extensible workflows.
- Contextual memory and self-correcting execution for autonomous task handling.

TROJAN-GFW

<https://github.com/trojan-gfw/trojan>

Oct 2017 - Present | C++

- A fast and lightweight obfs web proxy aiming at penetrating DPI (Deep Packet Inspection) firewalls.
- Features anti active and passive protocol detection.
- Received **19k+ stars** on GitHub, has millions of users, and gained its entrance into major Linux distributions, such as Debian and Arch Linux.

LANDROP

<https://landrop.app/>

Jan 2021 - Present | C++, Electron, Flutter

- A cross-platform file transfer tool that allows you to share files between different devices.
- Gained millions of users and helped transfer over 100 million files.
